

Fortifiber Jumbo Tex® Weather-Resistive Barrier

Proudly sold at your local [Knez Building Materials supplier](#).

Jumbo Tex has been used by architects and builders to protect over five million homes and commercial buildings from damage due to moisture and water penetration. It is employed in both production and custom residential construction to provide a reliable weather-resistive barrier that can balance the needs of moisture protection and breathability. Jumbo Tex® offers twice the water protection rating of conventional Grade "D" paper. The paper exceeds minimum code requirements while also providing optimal breathability to prevent moisture condensation within exterior walls. Just as important is its durability, allowing it to resist the puncturing, tearing, other wear inflicted on the job. Jumbo Tex® is a crucial component in eliminating moisture-related issues, including mildew, mold, and water-related structural failures.
