

TOUGHROCK® FIREGUARD® ABUSE-GUARD® GYPSUM BOARD

ToughRock® Fireguard® Abuse-Guard® gypsum board specially formulated with a durable surface to resist indentation in areas with high-traffic, such as offices, hospitals, schools, and correctional institutions. In accordance with the definition in ASTM C 1396), the board is an abuse-resistant Type X product.

The board's dimensionally stable, non-combustible (as defined and tested in ASTM E 136) gypsum core is situated between heavy liner paper on the back face and smooth, abuse-resistant, heavy paper on the front face. The enhancements in the board's core and durable face paper give it an extra level of integrity against scraping, gouging, rubbing, indentation and other abrasion, while also offering an excellent surface for decorative treatments.

Underwriters Laboratories LLC (UL) has classified the board and included it in assembly designs which UL has invested for hourly fire-resistance ratings. For more details, please see the [the assemblies library](#).

SPECS/SUBMITTALS

Each face and long edge is covered with paper made from 100% recycled materials. The paper on the front face is ivory white and the paper on the opposing face is grey. Boards have square-cut ends and tapered long edges.

Products have received both GREENGUARD Indoor Air Quality® and GREENGUARD Children & Schools certifications. They also have certified low levels of VOC emissions (volatile organic compounds).
