

TOUGHROCK® FIREGUARD® SOFFIT BOARD

ToughRock® Fireguard® soffit board is intended to be a drywall for ceilings on the exterior portion of buildings which are not directly exposed to water (called the soffit). Designed with a specially developed core and treated paper facings, ToughRock Fireguard soffit board is suited for industrial, commercial, multi-family residential, and institutional construction. It is resistant to both moisture and sag and is ideal for use in garages, carports, walkways, canopies, covered porches, and other protected exterior ceilings. As a Type X gypsum board (per UL classification), it can be used in conjunction with a diverse assortment of assemblies, including those which are fire-rated wood and steel framed.

ToughRock Fireguard soffit board has a non-combustible (in accordance with ASTM E 136) core with dimensional stability. The paper on the faces and long edges (made from 100% recycled material) is tan in color. The ends have no paper facing and have been smoothly finished with a square, contributing to both customizability and durability.
