

GOLD BOND® EXTERIOR SOFFIT BOARD

PROUDLY SOLD AT YOUR LOCAL [KNEZ BUILDING MATERIALS SUPPLIER](#).

DESCRIPTION

Knez Inc. is please to carry Gold Bond® BRAND Exterior Soffit Board. A board manufactured with a uniquely treated gypsum core encased by water-repellent surface paper (made from 100% recycled material) formed to the Gold Bond Sta-Smooth edge.

BASIC USES

Exterior Soffit Board is a fire-resistant gypsum panel, engineered to resists the extra moisture and sag imposed by exterior conditions. Designed for use in soffit or sheltered exterior ceiling areas (not directly exposed to water), the board is perfectly suited for open porches, breezeways, and carports in residential construction and walkways, marquees, and covered parking areas in commercial construction. Do not use on vertical surfaces or sidewalls—Soffit Board is for ceiling use only.

Soffit Board may be fastened to metal framing via direct attachment or suspended metal furring, and to wood framing or furring using conventional methods.

ADVANTAGES

Warp and Sag Resistance. Even after many wet-dry cycles, the board resists sagging due to its sturdy gypsum core and water-repellent surface paper.

Dry and quick Installation. Exterior Soffit Board has the same quick and economic characteristics of traditional drywall: Fast and easy score-and-snap adjustments, quick fastenings by nail or screw, compatible with conventional furring and trim. No saws or special tools are needed.

Fire-resistance. Increased fire protection is provided by the board's non-combustible gypsum core.
