## **GOLD BOND® HIGH FLEX® GYPSUM BOARD**

### **DESCRIPTION**

Gold Bond® BRAND High Flex® Gypsum Board features a fire-resistant gypsum core surfaced by a naturally finished, heavy paper on the face and long edges, and a strong liner paper on the back. The core is reinforced and protected by the long edge paper and the smooth-finished ends have been square-cut. The panel's edges are tapered to facilitate joint reinforcement with Proform® BRAND Joint Tape and concealment with Proform® BRAND Ready Mix or Quick Set Setting Compounds. It is recommended to use ProForm® BRAND XP® Ready Mix to optimize mold resistance.

### **BASIC USES**

High Flex Gypsum Board is specially engineered for radial construction such as archways, curved walls, and stairways. Suitable for applications involving either convex or concave surfaces, the board is usually applied in double layers.

### **ADVANTAGES**

Made from a cost-effective, lightweight material, High Flex Gypsum Board is compatible with a large variety of finishing decorations. The panels are made to cut easily, install quickly, and permit paint application or other decoration (including wood or metal trim) almost immediately after installation. Consisting of a non-combustible gypsum core, the board permits negligible contraction/expansion due to typical changes in atmosphere.
