## **GOLD BOND® HIGH STRENGTH™ CEILING BOARD**

### **DESCRIPTION**

Gold Bond® BRAND High Strength™ Ceiling Board is uniquely designed with an enhanced gypsum core, surfaced paper made from 100% recycled material. The core offers superior uniformity and extra integrity, giving it sag resistance strength equal to that of the 5/8" Type X gypsum panels.

### **BASIC USES**

Gold Bond® High Strength Ceiling Board is uniquely manufactured for ceiling applications in which framing members are spaced up to 24" o.c. and a water-based texture will be applied.

### **ADVANTAGES**

Superior sag-resistant strength. Overall sag on tested assembly have been witnessed to be equal to that of 5/8" Type X gypsum board. (Test report can be produced upon request.) With High Strength Ceiling Board, there is no need to have two different gypsum board sizes. The same material can be used in wall applications, reducing scrap produced from the ceiling. Increased ability to hold nails, superior working qualities, and its scoring and snapping characteristics minimize the need for rasping.
