

BEADEX® QUICK SPRAY DECORATIVE TEXTURE

PROUDLY OFFERED BY YOUR LOCAL [KNEZ BUILDING MATERIALS SUPPLIER](#).

PRODUCT FEATURES

BEADEX Quick Spray Decorative Texture is a high-performing, non-aggregated texture, designed to be quickly and easily sprayed over primed gypsum panels. It results in prominent texture designs which can conceal and forgive surface imperfections. The product offers a variety of appealing textures for interior wall surfaces. It is ideal for use on most interior surfaces, including gypsum drywall, plaster, and concrete.

The texture's powder formulation mixes easily with water, requiring no need for overnight breakdown. It is the ideal product for producing appealing decorative texture patterns, such as orange peel, spatter, and spatter/knockdown. It offers lower shrinkage, less cracking, and a sturdier finish than joint compound texturing.

Once applied, this formulation's surface remains wet long enough for the user to control the finishing process, achieving more uniform finishing patterns. It has superior surface relief for aesthetic texture decoration, drying to a white, soft-tone, firm surface. Paint once completely dried. The product is not washable if it is not painted.
