

SHEETROCK® DURABOND® SETTING-TYPE JOINT COMPOUNDS

PROUDLY OFFERED BY YOUR LOCAL [KNEZ BUILDING MATERIALS SUPPLIER](#).

FEATURES

Knez Inc. is pleased to carry SHEETROCK® DURABOND® Setting-Type Joint Compounds. Designed for one-day drywall finishing, this product is specially suited for laminating gypsum panels to gypsum panels, above-grade concrete surfaces, and sound-deadening boards.

SHEETROCK Brand DURABOND setting-type joint compounds are formulated to permit same-day joint finishing and next-day decoration. They are chemically-setting powder compounds that deliver a hard, plaster-like surface once dried. Humidity has virtually no effect on the compounds.

The product may be applied in many functions. The compounds can be used for filling, smoothing, and finishing interior concrete ceilings and above-grade concrete surfaces. They may also be applied in taping and finishing SHEETROCK Mold Tough™ gypsum panels, as well as taping and finishing FIBEROCK® Aqua-Tough™ tile backerboard under tiles. Additional applications include presetting veneer plaster finish system joints and finishing joints in exterior gypsum ceiling boards. These compounds are excellent for heavy fills.

It is strongly suggested that the compounds be smoothed prior to drying, as they are difficult to sand once they are set. Their exceptionally low shrinkage and excellent bond make them ideal for laminating gypsum panels to gypsum panels, above-grade concrete surfaces, and sound-deadening boards.

The compounds may be ordered in an assortment of different setting times to accommodate your job site's individual needs. DURABOND 20 sets in about 20-30 minutes; DURABOND 45 in 30-80 minutes; DURABOND 90 in 85-130 minutes; and DURABOND 210 in 180-240 minutes.

The compounds meet ASTM C475. These products are fire rated.
