

BEADEX® FLEX TAPE - FLEXIBLE METAL TAPE-ON CORNER

PROUDLY OFFERED BY YOUR LOCAL [KNEZ BUILDING MATERIALS SUPPLIER](#).

PRODUCT FEATURES

Knez is pleased to carry BEADEX® Flexible Metal Tape-On Corner, a product designed to produce straights and strong corners at any angle, and in any room. Available in a wide variety of flexible metal corners, there is sure to be one to meet the decorating needs of your project.

This is a high-quality product that combines strength of steel with the superior adhesion of a compound-to-paper bond. The corners are engineered with two strips of steel fastened to a durable paper tape covering that ensures exceptional adhesion of joint compound, paint, and textures. They are easy to install and resist edge cracking and chipping. The result is a visually appealing corner that maintains its appearance, even after normal wear-and-tear and building fluctuations.

The corners' special nose coating on the paper fights against fuzzing and scuffing during sanding and finishing. It applies with joint compound (not nails), eliminating the risk of nail popping if the wood frame shrinks..

Available in 3 Varieties:

- B1 Beaded Flex delivers straight, strong outside corners; with unique raised bead that makes for easy and fast joint compound finishing
- B2 Flex delivers strong, straight inside corners at any angle
- Flex Tape is designed to fit corners inside or outside at any angle

The corners are backed by a [lifetime-limited warranty](#).
