## BEADEX® PAPER-FACED METAL CORNER BEAD

PROUDLY OFFERED BY YOUR LOCAL [KNEZ BUILDING MATERIALS SUPPLIER](#).

### PRODUCT FEATURES

Knez Inc. is pleased to carry BEADEX® Paper-Faced Metal Corner Bead, a metal corner trim designed to provide smooth, strong corners with excellent crack and chip resistance.

BEADEX paper-faced metal corner bead produces sturdy, cost-effective, visually appealing interior corners that stand up to normal building abuse. The paper tape covering guarantees superior adhesion of joint compounds, textures, and paints.

The bead is formed by laminating a durable paper tape a strong, rust-resistant metal form. Its sturdiness and integrity ensure your corners will resist edge cracking and chipping and stay beautiful despite building fluctuations and abuse.

The bead installs quickly and easily with a specially formulated paper tape "nose coating" that resists scuffing and fuzzing from knives and sandpaper grit. It is available in a variety of types such as nail-on, tape-on, as well as inside and outside profiles. The tape-on versions need a joint compound to adhere the bead to the corner, and the nail-on variety the same paper-faced-metal technology, providing exceptional adhesion for joint compounds, textures, and paints, ensuring a strong, smooth finish.

The beads are backed by a 30-year limited lifetime warranty, so you can be confident in this product's long-term performance. For details, see the documentation for the [Tape-On Warranty](#) and [Nail-On Warranty](#).
