

Trim-Tex® 3/4" Bullnose Corner Beads

Proudly sold at your local [Knez Building Materials supplier](#).

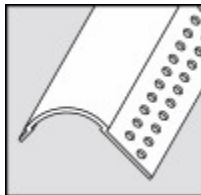

Bullnose Inside Corner Bead

Designed to round inside corners. Manufactured from rigid vinyl which can be mitered and, if necessary, glued with PVC pipe cement. Produced already primed with a vinyl alkyd texture coating.

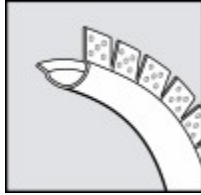

Bullnose Kerfed Corner Bead

Designed to create a rounded casing for window and door openings. This product is similar to "J" Round corner except it has a short leg protruding outward for insertion under an adjacent surface.

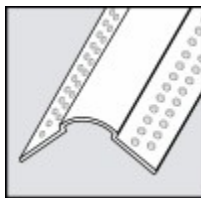

Bullnose Kerfed Arched Corner Bead

Functions the same as the standard Bullnose Kerfed Corner Bead, but cut with notches that allow it the necessary flexibility to conform to any arch or curved corner.

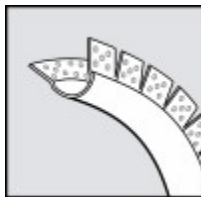

Bullnose Outside Corner Bead

Bullnose Outside Corner Bead is made from a rigid vinyl designed to resist rust, dents, and kinks—all with the classic rounded look of the 90's. Produced already primed with a vinyl alkyd texture coating.

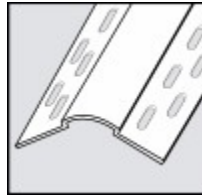

Bullnose Archway Corner Bead

Produced with evenly spaced notches gives the Bullnose Archway Corner Bead the flexibility it needs to conform to archways and other curved patterns, adding another dimension to interior design possibilities.

45 Degree Splayed Bullnose Outside Corner Bead

This bullnose design is meant to fit those unusual corner angles. The 45 Degree Splayed Bullnose eliminates taping yields hard, straight lines.

45 Degree Splayed Bullnose Inside Corner Bead

Use the 45 Degree Splayed Bullnose Inside Corner Bead on any inside off-angle wall in your next project.
