

Trim-Tex® Corner Beads

Proudly sold at your local [Knez Building Materials supplier](#).

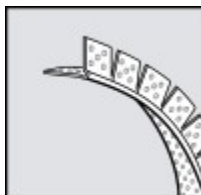

Corner Bead

The newly formulated low-profile corner bead from Trim-Tex® requires less mud than before. Primed with a vinyl alkyd texture coating and made of a rigid, white vinyl, this product resists rust and damage twice as much as steel trims. The beads are easy to use, installing with just nails or staples into drywall. Available with a width of 1 ¼" and lengths of 8', 9', 10', and 12'.

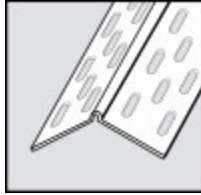

Archway Corner Bead

Perfect for finishing applications in archways or other curves. Its tightly-spaced notches allow it the flexibility needed to conform to arches and circular patterns as small as 24" in circumference. Available with a width of 1 ¼" and lengths of 8', 10', and 12'.

45 Degree Splayed Corner Bead

This outside corner bead is designed to fit and conform unusual corner angles, ranging from 100 degrees to 140 degrees. It ensures that mud ridges stay straight and definitive without the use of tape. The bead also prevents cracking. Available with a width of 1 ¼" and lengths of 8' and 10'.
