

IMPERIAL® BASECOAT PLASTER

A DURABLE, ABRASION-RESISTANT VENEER PLASTER

Provides the durability required of plaster in high-traffic areas. Suitable for direct application to concrete block or on top of a bonding agent on monolithic concrete.

PRODUCT FEATURES

IMPERIAL Basecoat Plaster is a high-performance, durable, veneer plaster intended for double-coat applications over porous concrete block, IMPERIAL Gypsum Base, or USG™ Plaster Bonder on the following surfaces: DUROCK® Cement Board, FIBEROCK® Abuse-Resistant Gypsum Fiber Panels, and monolithic concrete.

It can be applied by hand or machine and is available in thicknesses varying from 1/16" to 3/32".

The plaster delivers a hard, abrasion-resistant surface with compressive strength of 3000 lbs./sq. in. It can take the abuse of in many commercial and residential applications where walls are subject to heavy traffic.

Engineered to receive DIAMOND® Finish, RED TOP® Finish, high-strength STRUCTO-GAUGE® Gauging Plaster/lime putty, RED TOP Keenes Cement/lime/sand float finish, RED TOP Gauging/lime putty finishes, and IMPERIAL Finish Plaster. It offers a non-combustible solution when used in conjunction with IMPERIAL Gypsum Base.

The surface of IMPERIAL Basecoat Plaster must be left open and rough to achieve proper bonding and suction for the finishing coat. By failing to do so, the risk of delamination of the finish coat is greatly increased.

IMPERIAL Plaster Systems are recommended for the surfaces of interior walls and ceilings in all types of construction, especially for hard-wear applications where an extra level of abrasion-resistance and durability are needed.
